Our machines

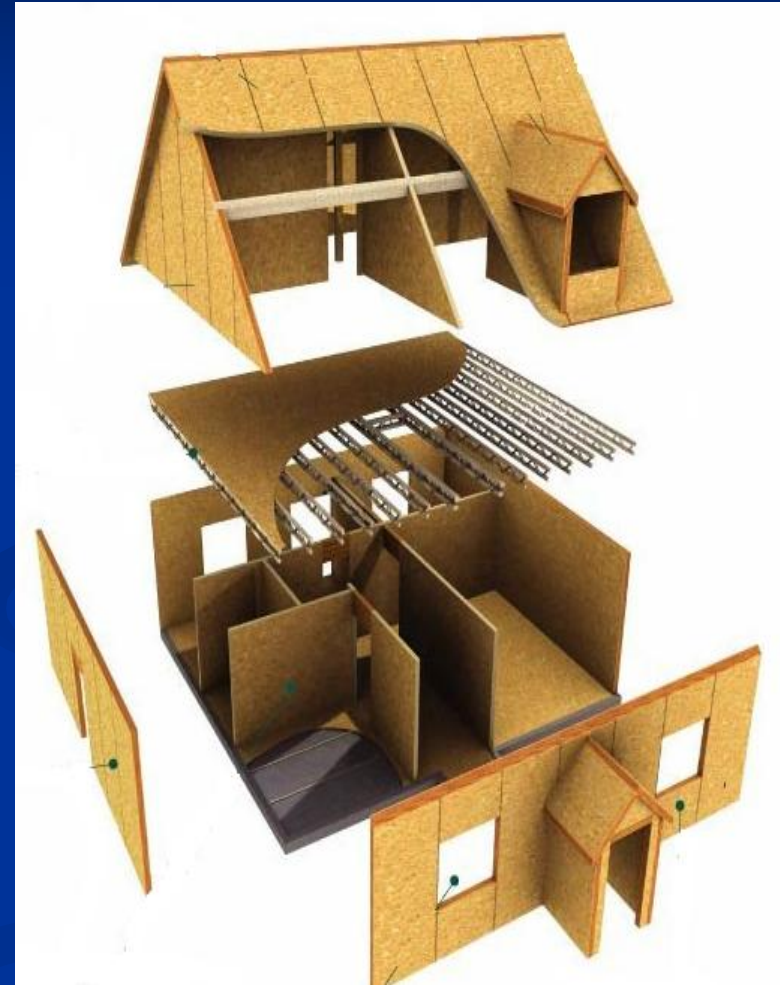

Technology

It is called “EcoPan”. The construction of prefabricated panel houses, through technology “EcoPan”, became one of the most advanced and acquiring popularity technologies in all the world.

Advantages of the technology:

- possibility of building in any seasons of the year
- high rate of building
- high thermal insulation properties
- lightness of construction
- high aseismic stability
- with standbility of the seasonally attacks
- easiness of finishing works

The panels /SIPs/

These panels have some very important properties:

- 4 times stronger than ordinary ones
- 8 times termoisolationer than brick or concrete ones
- low in materials consumption
- high speed of construction

Depending on its thickness can be used for walls, floors and roofing systems.

Quickly, Cosy, Termoisolated

Erection as per “**EcoPan**” technology can be done in any season of the year.

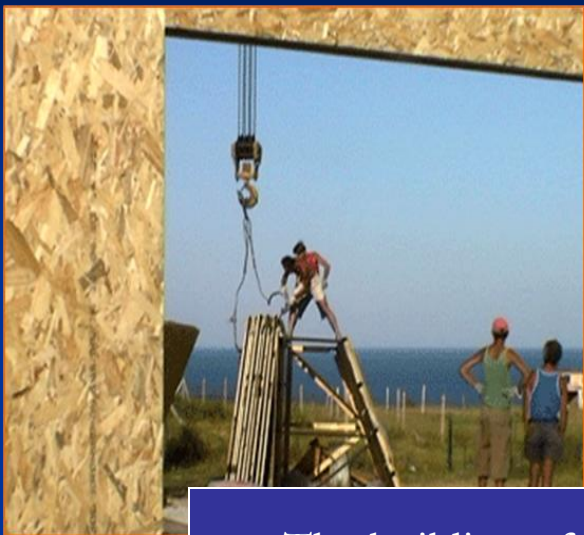

The built houses possess exclusive operation characteristics and durability.

Easy erection of the “**EcoPan**” structures gives the possibility to carry out non-standard solutions that make you feel lightness and up-to-dateness.

Architecture of houses built as per “**EcoPan**” technology can be variable – starting from the houses of classical forms up to the cottages of the most exquisite architecture.

In pictures

The building of one house, like that takes may be 3-4 days...

Ready houses /built by our panels/
